

Assignment – 4

Consider the following five binary operators: +, -, &, /, ^. Consider an infix expression with brackets (opening and closing), operand and operators. Convert this infix expression into the postfix.

Assume the following assumptions while converting the infix expression into its corresponding postfix expression.

- _ + and - follow right to left associativity
- _ * and / also follow right to left associativity
- _ ^ follow left to right associativity

The name of the program should be **assign4_<ROLL_NO>.c**.
